

TIACA Sustainability Strategic Partnership Program

Representing all parts of the supply chain, TIACA is in a unique position to lead sustainability matters within the Air Cargo industry. With this new program, Strategic Partners will work with TIACA to unite the industry towards a shared vision and common goals and provide guidance on sustainability best practices to entities of any size, in any sector, located anywhere.

We define sustainability as the **“3+2”**: **people, planet, profit + innovation & partnerships**, as we believe it is not only required to work on decreasing environmental footprint, maximizing economic profitability and positive social impacts, but it is also essential to work closely with industry players to drive innovation across the air cargo supply chain, supporting the development of new technologies that contribute towards sustainable growth.

If you think it is time to accelerate change and support the industry to embrace an innovative and sustainable mindset, join the other Sustainability Strategic Partners now.
